

# Advance<sup>®</sup> 14LP

LOW PROFILE PTA BALLOON DILATATION CATHETER

Reach and treat distal infrapopliteal lesions.

## EXCLUSIVE PERIPHERAL SHAFT

Coiled-wire shaft with 170 cm working length provides unmatched pushability and trackability while delivering flexibility and kink resistance.

## PERIPHERAL EXCHANGE

Unique 50 cm peripheral exchange system increases pushability while still allowing faster device exchanges and use of shorter wires.

## LONG-LENGTH BALLOONS

Balloon lengths from 20-200 mm are all compatible with 4.0 Fr sheaths—even after deflation.

## EXCLUSIVE PERIPHERAL SHAFT

### 170 cm coiled-wire shaft

- Provides the trackability and pushability to reach even the most remote infrapopliteal lesions.
- Delivers flexibility and kink resistance, which enhance your ability to travel through the tortuous vasculature of the lower leg.
- Ensures stable wire position during sheath retraction.

### Ultra-low crossing profile

- Improves your ability to traverse lesions. The smooth tip transition and hydrophilic coating on the balloon and distal shaft help reduce resistance even further.

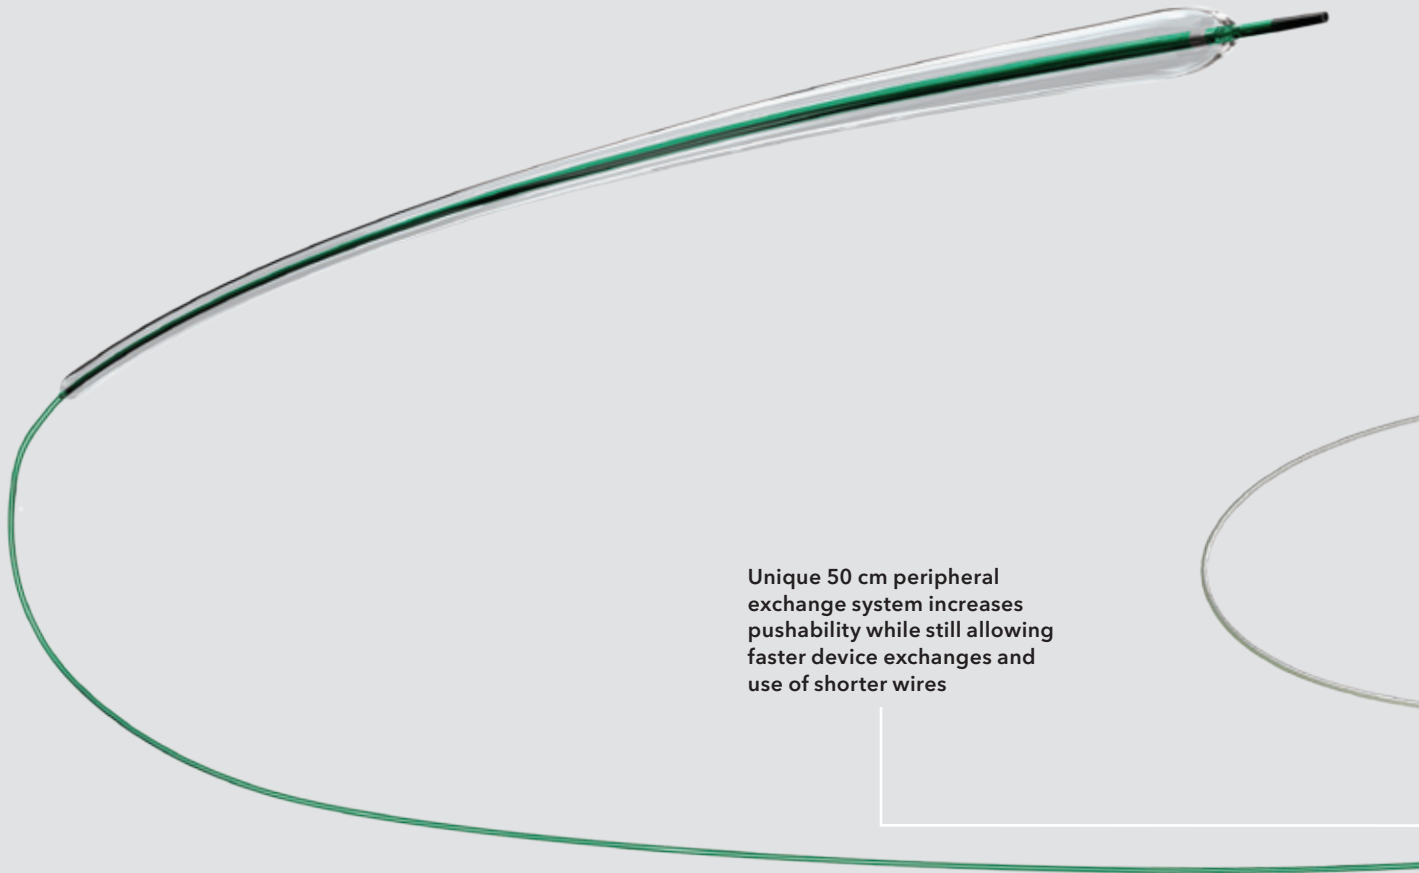

## PERIPHERAL EXCHANGE SYSTEM

### Unique 50 cm exchange port

- Increases pushability to ease your infrapopliteal procedures. Allows the use of shorter wires.
- Facilitates faster device exchanges, which may decrease your procedure time and radiation exposure.

### Compatibility with Shuttle® Tibial Infrapopliteal Access System

- Enhances pushability in your infrapopliteal procedures by containing the wire and catheter shaft in a specialized sheath engineered for the task.

# LONG-LENGTH BALLOONS

## Balloons from 20-200 mm

- Allow treatment of longer lesions with fewer inflations and deflations.
- Are all compatible with 4.0 Fr sheaths—even after deflation.

Exclusive coiled-wire shaft for unmatched performance

## Laboratory Testing\*

\*Data on file.

**Trackability.** Objective: To assess the balloon catheter's ability to navigate tortuosity.

**Pushability.** Objective: To assess the balloon catheter's ability to deliver the maximum amount of force to the distal end of the catheter when resistance is encountered.

**Crossing Profile.** Objective: To measure the distal section of the balloon to assess the profile when crossing a lesion.

**Sheath Retraction.** Objective: To assess the balloon catheter's ability to retract from introducer sheath with minimal resistance.
